

## Digital Juice Sound FX Library

The new **Digital Juice Sound FX Library** is a massive library of more than 10,000 audio clips in over 100 categories, making it one of the largest sound effects collections ever. All these effects are losslessly encoded audio with 96kHz sample rate & 24-bit sampling. The audio collection was designed by video editors for video editors. With the bundled Juicer 3 software, you can easily check each sound effect, perform a search for specific category & convert to your preferred audio formats. It is broadly broken up into four classes or type of effects:

**General FX** has exactly what you'd expect from a more traditional sound effects package & includes movie-style Foley work & recognizable recorded sounds of all sorts.

**Nosie FX** contains synthesized electronic sounds as well as real-world sounds manipulated beyond recognition that are particularly well suited to television, broadcast & video productions. It's also useful for spicing up your transitions, text slides, bullet points or to add flair anywhere you need audio punctuation.

**Musical FX** consists of individual musical instrument elements, fully produced musical logos, transitions & textures useful as background soundscapes or for establishing your audio identity.

**Human FX** class of effects involves professional voice work recorded in a studio setting. For example, Sound FX has hundreds of announcer-voiced words & phrases such as "We'll be right back", "Stay tuned!" & "Thanks for watching". Producers will have instant access to professional voiceovers without having to go into the recording studio.

**All these sound effects for only RM2,800 (28 cents per effect)**

## Digital Juice StackTraxx

StackTraxx layered digital music library is on the cutting edge of royalty-free music libraries. StackTraxx allows you to turn layers on or off to create original mixes or to isolate individual tracks for specific effects & uses.

Digital Juice StackTraxx have 11 different volumes with up to 40 original high quality layered audio tracks in each volume. 4 broadcast cuts per layered audio track and each audio track has 4 – 7 separate layers.

With Digital Juice Juicer software, you can output to WAV or AIFF format at 11khz, 22khz, 32khz, 44khz & 48khz (8 or 16 bit).
