Some advocates on a low budget say you could get realtime editing performance with a reasonably priced but powerful PC and a reasonable priced "realtime" editing software. This is true to a certain extent but as you add more effects to your video like Picture-in-Picture, 3D transitions plus numerous effects and filters, your realtime preview and playback performance will diminish. Moreover, software-based NLEs do not give a true realtime video resolution & frame rate output to a video monitor - a vital component required by the professional video editor.

Canopus EDIUS NX redefine video production capability & affordability with a groundbreaking, tightly integrated software & hardware:

- Realtime mixed format editing of NTSC/PAL, DV, MPEG-2, Quicktime, Flash video, uncompressed and lossless SD video with EDIUS Pro editing software
- Realtime, render-free output to DV and analog devices, directly from the timeline
- Realtime aspect ratio conversion and output, including 16:9-4:3
- Realtime effects, keyers, transitions and titles
- High-quality proprietary software codecs, including the award-winning Canopus HQ codec
- High-quality analog and digital inputs/outputs for DV, S-Video, composite video and unbalanced audio
- Hardware-based video overlay design for accelerated SD editing

Furthermore, EDIUS NX gives you **realtime, full quality, full frame rate analog and DV output**, which allows you to preview your work in progress on the type of display on which it will ultimately be seen - a video display.

Canopus EDIUS NLE software version 4.0 (NEW!)

The new EDIUS 4.0 software offers the **highest image quality & performance available today in any SD/HD video editing solution**. Featuring the revolutionary Canopus HQ Codec, EDIUS Pro 4.0 provides professionals with advanced realtime, mixed format SD/HD editing, compositing, chroma keying, titling and timeline output capabilities. Unrivaled video transcoding technology performs realtime conversion between different HD and SD resolutions (1920x1080*, 1440x1080, 1280x720 & 720x480), aspect ratios (16:9 & 4:3) and frame rates (60i, 50i & 24p).

Delivering realtime playback & DV output of all effects, keyers, transitions & titles, EDIUS Pro 4.0 can export projects to any format or medium required, including DVD-Video, directly from the timeline. Additional new features in EDIUS Pro 4.0 is **Nested timeline sequences & Multicam editing of up to eight different sources simultaneously**.

* EDIUS Broadcast 4.0 includes all the features of EDIUS Pro 4.0 video editing software plus a full range of industry-standard format support features, including support for newer, non-tape forms of video recording and storage, such as DVCPRO® P2 and XDCAM™.

EDIUS 4.0 will be on display during Malaysia No.1 International Broadcasting Industry Show, IBIS 2006 from 5th to 8th of September 2006 at Booth No. A029, Kuala Lumpur Convention Centre.
